The original building had so much character and a great location. We were able to take advantage of both of these and repurpose much of it into the new brewery and restaurant.

The building rests on piling. The building continuously moves and nothing in the building is square. The brewing tanks needed a tall space so portion of the floor were removed and opened up. This provided a structural challenge but added a wonderful feel to the spaces. The restaurant was located along the water and large siding doors were added to take advantage of the view. The entire building required upgrades to the electrical, plumbing and mechanical systems.
